## Presentation Outline

# Online Voting System

**Desktop Application with real-time result Dashboard**

# INTRODUCTION

- The **Online Voting System** is a digital application developed using **Java** that allows voters to cast their votes electronically instead of using traditional paper ballots.
- This system helps in conducting elections in a **faster, more efficient, and reliable manner**. It enables voters to securely log in, view the list of candidates, and cast their votes through a computerized interface.
- The system also helps administrators manage elections, monitor voting activities, and generate results automatically.

# Problem Statement

Traditional voting systems are time-consuming and require manual vote counting.

They may lead to human errors and delays in result generation.

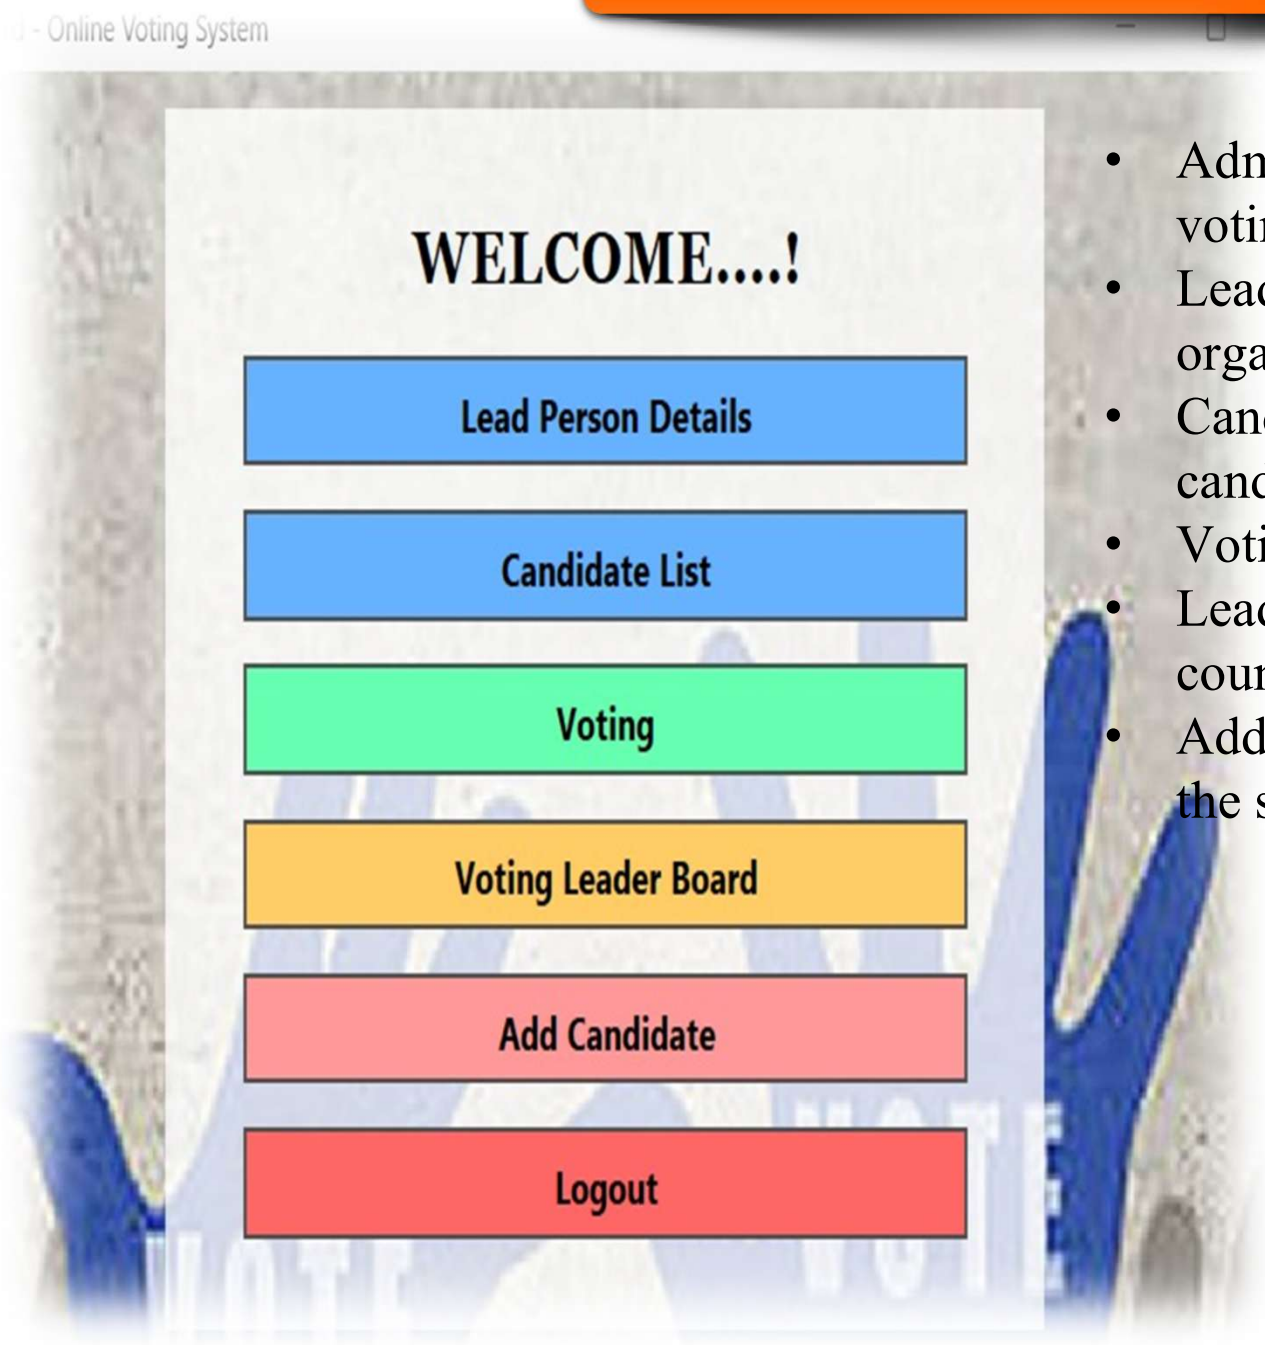
Managing large elections can be difficult and costly.

A secure **Java-based Online Voting System** is needed to allow voters to vote electronically while ensuring **security, accuracy, and transparency**.

# Problem Objectives

- To develop a **Java-based application** for conducting elections digitally.
- To allow **registered voters to cast their votes securely** through the system.
- To **prevent duplicate voting** by verifying voter identity.
- To **store voting data safely** in the database.
- To **automatically count votes and generate results quickly**.
- To reduce **manual effort, time, and errors** in the election process.

# Admin Dashboard



- Admin manages and controls the entire voting system.
- Lead Person Details: Manage election organizer information
- Candidate List: View all registered candidates
- Voting: Monitor voting process
- Leader Board: View candidate vote counts and rankings
- Add Candidate: Add new candidates to the system

# Database Design

- The database stores and manages information related to voters, candidates, and votes. It is connected to the Java application using **JDBC.**
- **Main Tables**:
- **Voter Table**: Stores voter details and voting status
- **Candidate Table:** Stores candidate information
- **Vote Table**: Stores voting records

# Conclusion

•The Online Voting System provides a **secure and efficient digital voting platform**.

•It simplifies election management and reduces manual effort.

•The system ensures **accurate vote counting and quick result generation**.

•It improves **transparency, reliability, and efficiency** in the election process.

# THANK YOU
